Bengaluru, India · Notice: negotiable

I design systems for complicated decisions, and I build enough of them myself to know what a decision costs. Seven years across enterprise telecom and industrial B2B, the last four as the only UX designer on a US telecom's quoting, billing and agent platforms. I prototype in React, Three.js and Babylon.js, route work across AI models the way a studio routes work across people and never ship their first answer, and ship with motion, accessibility and reduced-motion fallbacks built in. Self-taught in both.

01 STACK

Black: daily. Grey: shipped with, less often.

React 19 · hooks · router | **TypeScript** | **Tailwind** v4 · tokens | **Motion** GSAP · ScrollTrigger · spring · reduced-motion | **Figma** systems · variants · prototyping | **Three.js** NPR shaders · ortho cams · perf | **Babylon.js** Havok physics | **Blender** asset creation · 3D direction | **Framer Motion** | **Radix / Base UI** primitives · a11y | **Web Audio** | **Vercel** CI · preview | **Vercel AI SDK** Inngest · Supabase · Langfuse | **AI tools** Claude Code · Cursor · v0 · image/frame gen | **Rendering perf** light baking · instancing · lazy media

02 EXPERIENCE

Oct 2022 — present

Senior Product Designer · sole UX on account

Infinite Computer Solutions · embedded with a US telecom client · Bengaluru

- Own end-to-end UX for enterprise platforms used by sales, operations and support agents: CPQ quoting, business billing, agent console.
- **UX decisions — The Cost of Attention:** billing urgency for two audiences from one dunning state — an always-on resolution bar with a state machine for agents, a non-blocking per-account tile for customers. Read the billing API to find the restoration amount and posting lag; phased my preferred interaction after engineering priced it at ~3 sprints.
- **Design engineering — ExpressQuote (CPQ 2.0):** turned a 47-field quoting form into a guided flow and shipped the account's first production design system. Built the prototype in React and handed over frontend production code, not just specs — reviews ran on the working build.
- Every problem gets a minimum of four built iterations before review; stakeholders get a gated live link, not a deck. Design under legacy APIs, latency and security constraints; stay through implementation so intent survives production.

Jan 2021 — Sep 2022

Visual Designer

L&T Technology Services · Bengaluru

- UI components and visual systems for industrial and engineering-led B2B applications; responsive and accessible, built alongside engineering for implementation accuracy.

04 HOW I DECIDE

> Deadline before clarity. Cost before preference. Shipped, in progress, proposed — never blurred. A working thing settles an argument faster than a mock does, so I argue with working things.

03 PERSONAL PROJECTS

RONIN

ALPHA · RONINOS.APP

Orchestration workspace that routes one request across several models and shows cost, latency, cache and trace per run. Modeless session loop, 5 primitives + editable memory, 11 ADRs. Vercel AI SDK, Inngest, Supabase, Langfuse.

Lanterns

SHIPPED · THREE.JS

A 48 s isometric film plus a 51 s parallel track in one town: orthographic film camera, behind-hero chase camera, rigged low-poly characters, procedural Web Audio. Storyboards captured from the build itself.

Batcave

SHIPPED · THREE.JS

Multi-level lit environment from a modular asset kit, presented as REC cameras. Rendering budget held with baked static lights and light-copy models.

SKYFLAP

SHIPPED · THREE.JS

A 3D airport read like a dashboard. Picked up by the official Three.js account.

BY1

IN PROGRESS · PREVIEW AVAILABLE

Babylon.js vehicle-combat game: drive, turret and sentry modes on Havok; Blender, Mixamo and generated assets.

05 WORKING WITH AI

Frame	brief, IA and constraints written by me first
Route	different models for different jobs; results compared, not trusted
Iterate	min. 4 built variants per problem; AI output is a draft, I decide
Ship	gated live link to stakeholders · traces · honest status

Proof — RONIN: multi-model orchestrator, built and traced end to end. This site: designed, coded, animated, night mode. Previous portfolio: navigable 3D rooms, Three.js, fully my own build.
